

VETRI DMG[™] » Pure N,N-Dimethylglycine (DMG) 125 mg

Supports immune system function and performance.

DMG is an adaptogen that helps the body cope with various forms of stress caused by aging, poor oxygen availability, free radical damage, and a weakened immune system.

DMG supports performance and cardiovascular health by enhancing circulation, efficient oxygen utilization and muscle recovery. DMG supports stamina through its ability to lower lactic acid buildup.

DMG helps to support and strengthen the immune response when challenged by foreign antigens and microorganisms. Clinical studies show that it supports lymphocyte (T and B cell) and antibody production.

DMG supports the production of intracellular glutathione and SAMe.

DMG supplies methyl groups for building and supporting normal detoxification of many constituents in the body, which supports skin and liver health. It also acts as an antioxidant to protect the body from free radical damage.

DMG is a precursor to many amino acids and amino alcohols that aid in brain function; it also provides precursors to neurotransmitters that help with nerve function.

Recommended for:

- » Immune system support
- » Liver metabolism and normal detoxification (methylanon)
- » Performance and stamina (circulation, oxygen utilization)
- » Muscle recovery (lactic acid)
