

The Phosphorus/Calcium management in chronic kidney diseases and the utility of FGF-23 in early-stage kidney diseases

29/Apr/2024 (Mon) 8:00 - 9:30pm HK Time

Fee: Free to attend

CPD Point: 1.5 (TBC)

Chronic Kidney Disease (CKD) is a common disease in veterinary medicine, recent advances in diagnostic tools has made early intervention possible, and the veterinarians can better manage the patients, resulting in better life qualities of the animals. This lecture will focus on the clinical impact of Phos/Ca imbalance, provide insights for early recognition of the condition, and discuss clinical cases utilizing FGF-23 testing.

1. Why is Phos/Ca management important for CKD patients?
2. What leads to Phos/Ca imbalance in a CKD patient?
3. How to utilize FGF-23 in the management of early-stage CKD?
4. Case studies
